

Driving Data-Driven Growth: How Travtics Business Intelligence (BI) Transforms Travel Agency Operations Through TRAACS

As travel management companies (TMCs) and travel agencies navigate increasingly complex market dynamics, relying on retrospective financial reports is no longer enough. To stay competitive, agencies require instant visibility into profitability, sales targets, and carrier incentives.

At **TRAACS**, our travel accounting and agency management software integrates directly with [Travtics Business Intelligence \(BI\)](#). This integration bridges front-office transactions, mid-office workflows, and back-office accounting with predictive analytics to empower decision-makers.

The Power of Native Integration: TRAACS + Travtics BI

While [TRAACS](#) handles core accounting, automated invoicing, GDS data capture, and credit control, **Travtics BI** serves as the analytical core. By processing live transactional data directly from your TRAACS environment, Travtics BI eliminates manual data exports and spreadsheets, providing real-time financial and operational intelligence across all business functions.

Key Capabilities of Travtics BI

1. Profit Link Bonus (PLB) & Airline Incentive Tracking

Managing Airline Incentives and Profit Link Bonuses (PLB) requires tracking performance against strict carrier rules. Travtics BI automates this process:

- **Custom Incentive Criteria:** Configure PLB parameters based on airline, ticketing window, origin/destination, class of service, or travel date.
- **Predictive Progress Indicators:** Visual performance bars show how close your agency is to reaching airline volume thresholds.
- **Opportunity Recommendations:** Guided insights identify non-PLB sales that can be nudged or re-routed to meet incentive criteria before the target period closes.

2. Real-Time Target Management

Agencies can track performance goals for individual staff members and corporate accounts:

- **Multi-Metric Targets:** Define targets based on transaction volumes or net profit yield.
- **Performance Visibility:** Real-time dashboards enable branch managers and department heads to recognize top performers and address underperforming sales segments early.

3. Income, Expense & Company-Level Budgeting

Financial management requires comparing projections against actual performance:

- **Multi-Dimensional Budgets:** Set and manage budgets by location, department, or specific service line.
- **Budget vs. Actual Variance:** Track actual revenues and operating expenses against budgeted figures in real time, supporting accurate cash-flow management and expense control.

4. Dedicated Customer & Supplier Dashboards

Preparedness is key during vendor negotiations and client reviews. Travtics BI provides single-click access to:

- **Airline Dashboards:** Detailed summaries of market share, revenue, and yield per carrier.
- **Corporate Client Dashboards:** Immediate access to Key Performance Indicators (KPIs), spend analysis, and ticketing volume summaries to support corporate QBRs (Quarterly Business Reviews).

5. Executive Mobility: The Travtics Mobile BI App

Decisions don't always happen at a desk. The **Travtics Mobile BI App** extends key metrics, executive dashboards, and high-level financial health indicators directly to iOS and Android devices, keeping leadership connected anywhere, anytime.

Connected Ecosystem: Beyond Analytics

Travtics BI operates as an integral part of the broader TRAACS ecosystem alongside other specialized modules:

- **NuCEM (Customer Engagement Management):** Syncs customer inquiries, requests, and automated credit validation directly into TRAACS.
- **NuPay (Virtual Payments):** Provides one-time-use virtual cards for secure supplier settlements with immediate profit and PLB recognition.

Conclusion

Integrating **Travtics BI** with [TRAACS](#) gives travel agency leaders the clear visibility needed to protect margins, hit carrier targets, and streamline performance management.
